

## Challenge:

To prepare a visualizing BI report for Bank Customers in different regions of the UK.

---

## Report:

1) Add the desired data file into the Tableau, in this case we have CSV file which contains following columns:

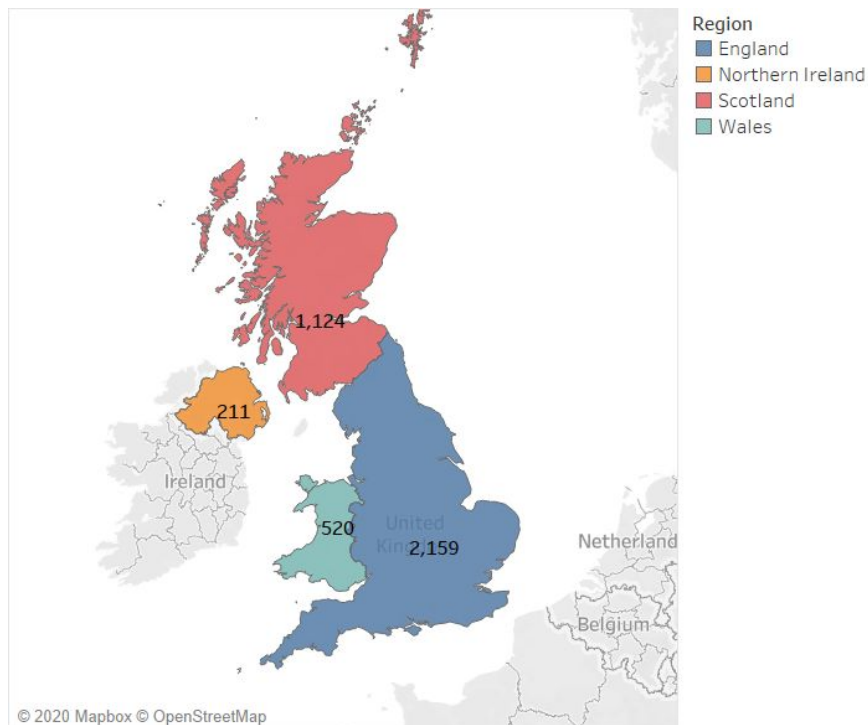

#	Abc	Abc	Abc	#	🌐	Abc	Abc	#
UK-Bank-Customer...	UK-Bank-Cust...	UK-Bank-Custom...	UK-Bank-Custo...	UK-Bank...	UK-Bank-Customer...	UK-Bank-Customers.c...	UK-Bank-Customers...	UK-Bank-Cust...
Customer ID	Name	Surname	Gender	Age	Region	Job Classifica...	Date Joined	Balance
100000001	Simon	Walsh	Male	21	England	White Collar	05.Jan.15	113,810.15
400000002	Jasmine	Miller	Female	34	Northern Ireland	Blue Collar	06.Jan.15	36,919.73
100000003	Liam	Brown	Male	46	England	White Collar	07.Jan.15	101,536.83

2) Load the data into Tableau, now it will be visible in the Data Source tab.

3) For getting the bank customers regions, select Region Column and change its geographical roles as State/province. Then add it on the Sheet.

4) Add the same region into details for colorful visualisation on the map.

Here, Map chart of region:

5) Now for visualization to portray the gender split in the customer base, we are going to use a Pie Chart.

6) Add a Pie Chart from 'Show Me' with Gender and Customer Record (Count) and set it to percentage of total.

7) Now, for creating Bins (groups) for proper age distribution visual just right-click on Age and create Bins, set to 5.

> Then put Age (bin) in Column and Customer Record (count) in Rows.

8) For creating Bins (groups) for Balance distribution visual just right-click on Balance and create Bins, set to 10000.

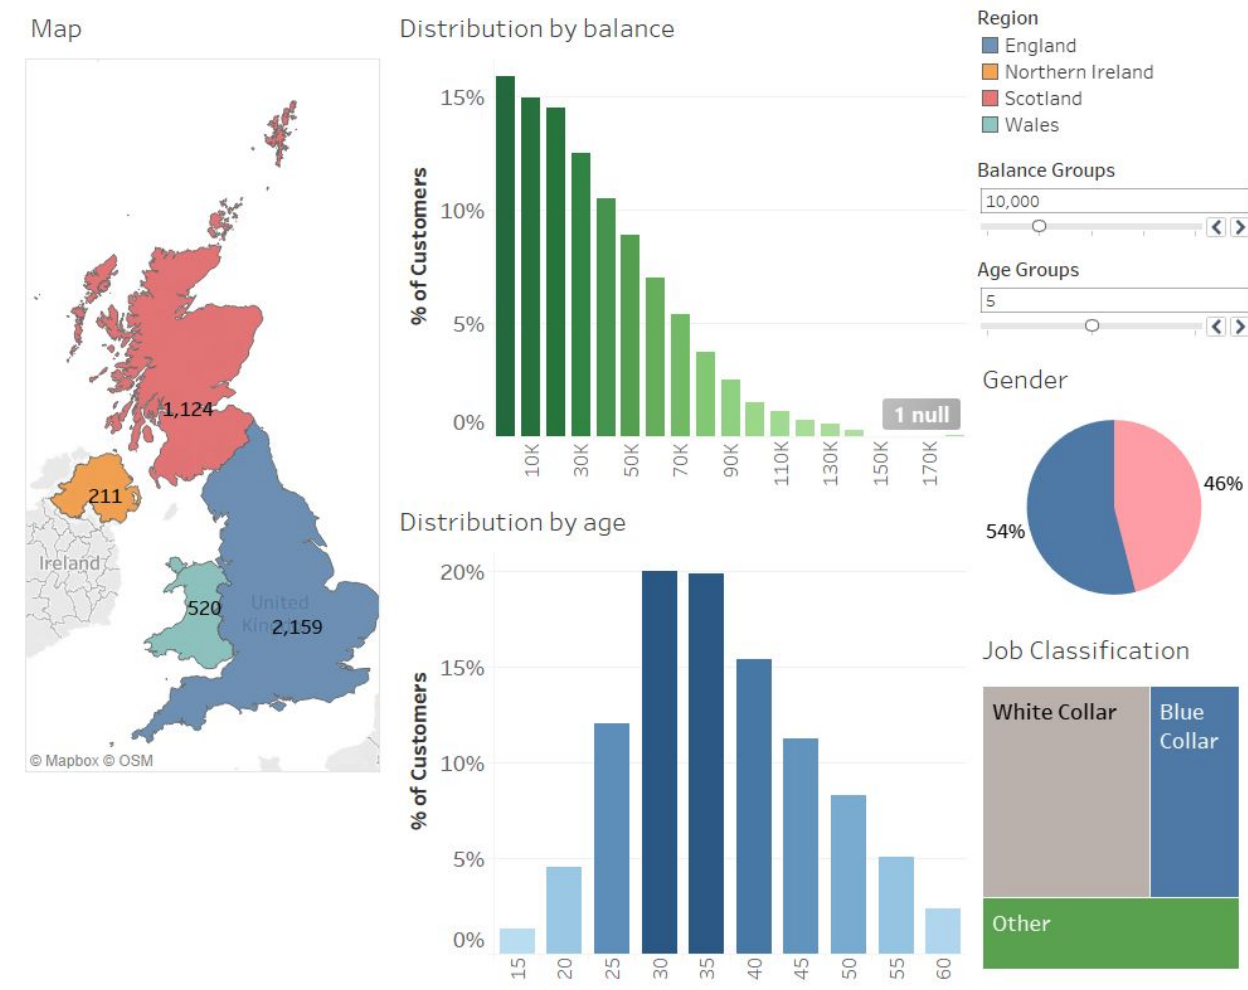

> Then put Balance (bin) in Column and Customer Record (count) in Rows.

9) Select a Tree map for portraying Job Classifications:

10) Now, we need to create a Dashboard and add all above sheets on the dashboard:

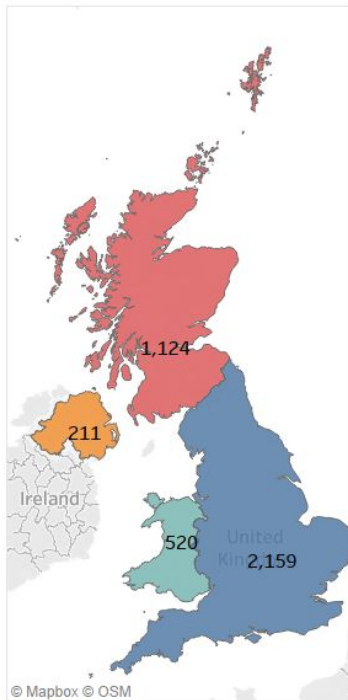

## 11) Creating a Storyline for the dashboard:

> This bank's customer base line.

### Story
